

RAID

TO SUIT FORD RAPTOR

INTRODUCING RAID TO SUIT **FORD RAPTOR**

Where form truly meets function. The Raid series of bull bars are a great option for those who appreciate sharp looks, while still achieving improved approach angles, greatly improved frontal protection, light mounting and full winch compatibility. A sleek urban design, with the toughest of tough-track capabilities.

12,000LB WINCH COMPATIBLE

Industry standards recommend a winch that's at least 1.5 times the weight of your vehicle, and with up to a GVM of 3130kg, the Raptor demands nothing less than 10,350lb winch. That's why we've ensured the Raid bull bar is compatible with a 12,000lb winch.

INCLUDED RECOVERY POINTS

We think recovery points are so important, we've included them in the bull bar. The recovery points are manufactured from 16mm steel, featuring non-abrasive radius edges and an elongated hole for different types of shackles. Plus, they're powder coated red for high visibility and are rated to 5-tonne (per point).

SAFETY IS A PRIORITY

Ironman 4x4's Raid series program incorporates all factory OEM safety features. Safety is not limited to the factory features, Ironman 4x4 performs in-house FEA and ADR compliance testing and complies with all state and territory regulations, meeting industry standards.

KEY FEATURES NOT TO FORGET

- Winch cradle mounted directly to the chassis for the strongest and safest possible winching platform for the harshest recovery situations
- The bull bar is made from 3mm steel, and the winch cradle is made from 5mm steel
- Winch cradle with included clutch handle access and line visibility
- Included two 5-tonne recovery points and 4mm skid plate
- Centre hoop with two light mounts
- Provisions for cube or fog lights
- Vehicle safety features maintained with radar and sensor compatibility
